Overview

- 2D top-down roguelike where you play as a lifetime gambler who would gamble his own life for pleasure.

Introduction

- You play as a burnt-out businessman who gambled away his entire fortune. With nothing left, he takes his first real job - a humbling descent into the working world he once looked down upon. Watch him struggle, fail, and desperately chase the jackpot he believes will redeem him

Game mechanic

Game flow

- Player will be spawned in first level where he needs to kill waves of enemies. When he kills enough enemies he can move to the next level. There are small amount of long levels. Coins are dropped from killed enemies, that player can pick up. With enough coins the player can enter the casino where he can gamble whatever he wants (coins, lives, stats …) to get stronger. At the end of the game is a boss fight, after the boss is defeated the game ends.

Player

- The player is a gambler who needs to earn money so he can continue his gambling passion.

Need to gamble

- Because of his past the player has the need to gamble, which is represented by a bar that fills over time and when player does not gamble enough he gets debuffs (withdrawal symptoms)

Weapons

- First the player will choose from three kinds of weapons. Each has its special effect.

Pencil - Melee weapon that does knockback on enemies.
Stapler - Pistol-like gun that shoots single projectile. Stronger but slower.
Pins - Shotgun like weapon that is represented as a fistful of thumbtacks. Bigger area of attack, weaker.

Enemies

- Throughout the day the player encounters enemies. Each Level(room) has three unique enemies. At the end of the final level is a boss fight.

Combat

- The player must dodge enemy projectiles, collect coins and kill all enemies. When fighting, the player must keep his need to gamble under critical levels to not get hit with debuffs.

Upgrades

- When a player collects enough coins to enter the casino where he can improve his stats with gambling or through a shop.

Levels

- There are three levels that are thematically divided as the player goes forward. The first level is the bathroom, second is the office room and last one is Boss office.

Level progression

- In each level the player needs to defeat all enemies and only then can he pass to the next level.

Controls

User interface

HUD

Main menu

- Play(start the game)
- Option(settings of the game)
- Quit(exit the game)

Pause menu

- Resume (resume the game)
- Option(settings of the game)
