Game overview

- 2D top-down gambling game with office theme.

Story

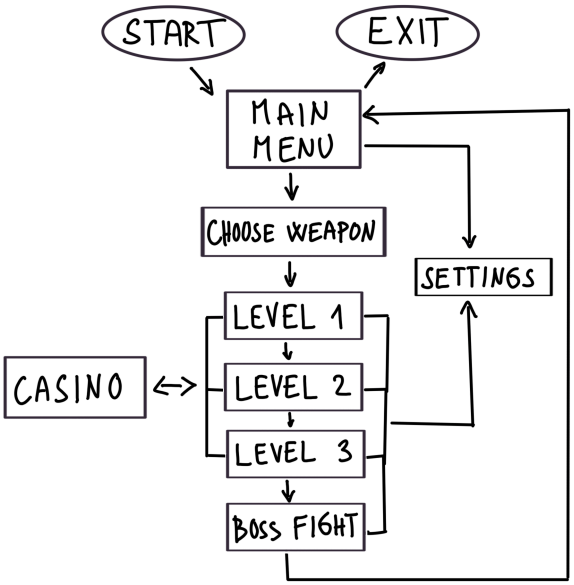
- The game follows the story of a burnt-out man with a serious gambling addiction. He spent his entire life living off his family's inheritance, never needing to work, but over time, his reserves began to diminish. The game starts at the moment he loses the last of his savings and realizes that, if he wants to continue supporting his habit, he'll have to find a job—for the first time in his life.
- He comes across an ad for a simple office job with minimal pay and no experience required. It seems like he may have found a way to maintain his questionable lifestyle. However, when he arrives at work, he's hit with the harsh reality that things won't be as easy as they seemed. He must fight his way—quite literally—through each day at the office, with the thought of his upcoming paycheck being his only comfort. All the while, he's haunted by his ever-growing urge to gamble.
- The player joins him for one particularly grueling workday. After a long and exhausting struggle with his office duties, he tries to escape by hiding in the workplace bathroom—but the chaos follows him even there. Unfortunately, his absence doesn't go unnoticed, and he's soon summoned to face his worst nightmare: his boss.
- After overcoming this final challenge, he finally receives the reward he's been longing for—his paycheck. In the end, he returns to his beloved casino and hits the jackpot he spent his whole life dreaming of.

Game mechanic

Game flow

- At the spawn of each level(map), the player will be spawned in a door to a level where they need to fight waves of enemies. When he survives enough waves, he can move to the next level by exiting through the door. There are three long levels.
- Coins are dropped from killed enemies that the player can pick up. With 100 coins in his pocket, the player can enter the casino, where he can gamble whatever he wants (coins, lives, stats …) to get stronger. At the end of the game is a boss fight; after the boss is defeated, the game ends.

Game states and transitions between them



Cut scenes

- The story will be highlighted through cutscenes—one at the beginning to introduce the main character and his background, short scenes between each level to maintain narrative flow, and a final cutscene after completing the game that reveals the character's happy ending.

Player

- You play as a burnt-out man who gambled away his entire fortune and needs to find a job to keep supporting his gambling habit.

Character stats

- The player can modify their character stats as they go through the game.
- Any attribute can be used as a currency in a gambling minigame, and he can win more or lose all of it.

Starting stats

Health points	Move speed	damage	attack speed	bullet speed (range)	knockback (melee)
100	10	5	3	10	5

Health point

- The player starts with 100hp as a base stat.

- They can gain HP back only via gambling.
- When his HP reaches 0, the player loses.
- When the player is hit, HP is reduced based on the enemy's damage.
- HP is displayed as a number on the player's screen.

Movement

- The player controls a 2D character that is moving in eight different directions: left, right, down(to the player), up (from the player) and all diagonals.
- The character sprite rotates based on the placement of the mouse cursor.
- Movement speed is affected by character stats that can be increased or decreased via a gambling minigame.

Special stat

- By choosing a melee or ranged weapon, the player will choose their special stat.
- For ranged weapons, the player gains bullet speed that determines how fast his projectiles will go.
- For melee weapons, the player gains knockback, which determines how far the player will knock an enemy.

Money

- Money is the base currency to pay in the casino.
- It is dropped by enemies upon death.

Need to gamble

- Due to his troubled past, the player is driven by an uncontrollable urge to gamble. This is represented by a meter that gradually fills over time. If the player doesn't gamble enough to satisfy the urge, they begin to suffer withdrawal symptoms, which apply gameplay debuffs.
- These symptoms are visually reflected in two ways - the environment shifts in color, becoming more distorted and surreal. The player's weapon begins to flicker—briefly replaced by gambling-themed visuals.
- If the player does not satisfy this urge in time, his weapons will change permanently, dealing significantly less damage, and his movement speed will decrease. This penalty can be reversed by gambling.

Weapons

- First, the player will choose from three kinds of weapons. Each has its special effect.
  <u>Pencil</u> - A Melee weapon that does knockback on enemies.
  <u>Stapler</u> - Pistol-like gun that shoots a single projectile. Stronger but slower.
  <u>Pins</u> - Shotgun-like weapon that is represented as a fistful of thumbtacks. Bigger area of attack, weaker.

Enemies

- Throughout the day, the player encounters enemies. Each Level(map) has three unique enemies. At the end of the final level is a boss fight.
- Each level has unique enemy types.
- After death, enemies will drop money that the player can then pick up.
    - Melee - 5
    - Ranged - 10
    - Special - 20
- Each wave has a randomly generated number of enemies of each type.
- When a wave starts, enemies are spawned randomly outside of the player's view with a little duration between each spawn.

Enemy	Type	Damage	HP	Speed	Special ability	Location
paper	melee	3	15	18	-	office
water dispenser	ranged	5	10	5	-	office
printer	special	-	25	8	spawns papers	office
towel	melee	5	20	15	-	toilets
Liquid soap	ranged	10	13	8	-	toilets
WC	special	7	18	4	rotate and shoot water drops in a spiral	toilets
cactus plant	melee	15	35	13	-	boss office
coffee mug	special	10	30	6	Bullet size scales with time	boss office
phone	special	13	20	5	Bullets fly in a wave motion	boss office

Movement of Enemies

- The movement of enemies differs.
- Melee enemies chase after the player with their higher speed.
- Ranged enemies try to keep a distance and react to player movement, and adjust their direction.

Office level enemies

Boss

- The boss is your boss from work and you must defeat him to keep your job.
- He has 300 HP and three different attacks.
- Each state takes 10s then changed to another.
- First - In three directions red markers will appear and after 1s he will randomly choose one to strike on.
- Second - He crouches to charge his attack and then slash in 90 degree cone
- Third - He spawn a laser pointing from him that will be moving in one direction around him and will be speeding up.

Attack	Damage	Special effect
Strike	30	Heals 10 HP after hitting the player
Slash	45	Slows the player down
Laser	60 per second in laser	Damage increases with speed

Combat

- The player must dodge enemy projectiles, collect coins, and kill all enemies. When fighting, the player must keep their need to gamble under critical levels to not get hit with debuffs.

Casino

- Player can enter the casino by pressing a button
- A fee of 100 coins is automatically deducted upon entry
- In the casino, there is a board showing all of the players' stats with current values.
- There is also a shop with 3 purchasable player stats by spending the saved up coins. The shop can also be reloaded for different stats to be available.
- Lastly, there will be a betting part where the player can bet any of their stats or coins to have a chance of winning even more stats. The player can bet only one stat in a single round, but the number of rounds possible in the casino is not limited.
- All of the stats have a lower limit, that is 1 for damage, attack speed, bullet speed/knockback, and move speed, and 0 for coins and HP. If HP reaches 0 in the casino, the player dies, gets a game-over screen, and has to start a new game.
- The player can also choose the amount of risk/reward the minigame will have before playing. Either high risk / high reward (lowest= -2x, highest= 10x), mid risk / mid reward (lowest= -0.5x, highest= 5x), or low risk / low reward (lowest= 0x, highest= 2x)
- After they choose the risk/reward mode, what stat to bet, and how much to bet using a slider, they can go to the gambling minigame.

Gambling minigame

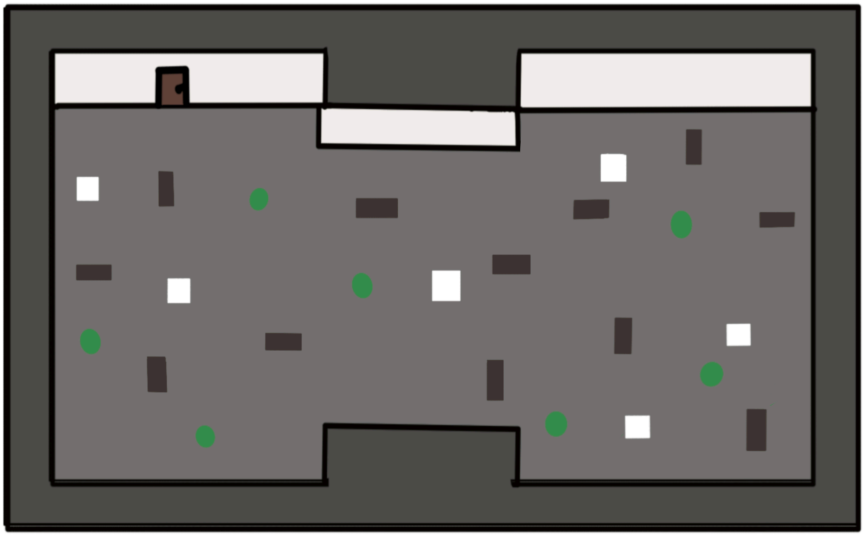
- The minigame is made in the style of the Plinko game, where a ball falls through a pyramid of pegs and falls into multiple (9) buckets at the bottom. Bucket values (multipliers) are mirrored—each bucket has the same multiplier as its opposite, with them increasing towards the sides (1=9=5x, 2=8=2x, 3=7=1x, 4=6=0.4x, 5=-0.5x). The multipliers increase based on the amount of the bet. In each round of the minigame, there is only 1 ball, which, after it falls into a bucket, the minigame automatically ends after 2 seconds and returns the player to the casino.
- When the player enters the minigame, the ball automatically falls down and interacts with the pegs on the way down.
- After the game ends, the stat that was bet is multiplied by the multiplier returned from the bucket and added to the player's stat.
- If the ball falls in the losing bucket (multiplier < 1x) multiple times in a row, the game will return a bit of the next bet (50%) if the ball were to fall in the losing bucket again.
- Likewise the same will happen for the winning buckets.
- The urge to gamble decreases proportionally based to the bet amount, bigger bet = bigger loss

Levels

- The game features three progressively themed levels, each represented by a distinct room. The journey begins in a standard office, continues through a bathroom, and the final level takes place in the boss's office.
- Each environment introduces unique enemies, as mentioned above, and obstacles that reinforce the atmosphere and tone of its setting.
- Obstacles are of two types
    - Solid obstacles - impossible to pass through and attack through
    - Slowing obstacles - slow entities moving through them
- The office
    - Enemies: paper, water dispenser, printer
    - Solid obstacles: tables, house plants
    - Slowing obstacles: cables, stacks of paper
- The bathroom
    - Enemies: towel, liquid soap, toilet
    - Solid obstacles: sinks, bathroom stalls
    - Slowing obstacles: water puddles
- The boss's office
    - Enemies: cactus, coffee mug, phone
    - Solid obstacles: tables, file cabinets
    - Slowing obstacles: spilled coffee, scattered documents

Office level concept

- Door - player spawn point
- Green and brown objects - solid obstacles
- White objects - slowing obstacles



Level progression

- In each level, the player needs to defeat all enemies in order to progress. After defeating them, a door will open, taking the player to the next level.

Boss fight

- After defeating all enemies in the last map, the boss will spawn.
- Boss fight is about predicting which of three attacks is going to be used, about dodging and about speed.

Controls

- Movement is controlled using the standard WASD keys. The mouse is used to rotate the player's view and to aim, while the left mouse button is used to attack.
- The casino can be accessed by pressing a button located on the top right of the page, and once inside, the player can navigate using the mouse, which is also used for navigating all the menus.

User interface

HUD

- Red bar on the top left represents HP
- Bellow it is players money
- The bar on the top right represents the need to gamble
- Bellow it is the button used to enter the casino

Concept art

Main menu

- Play(start the game)
- Option(settings of the game)
- Quit(exit the game)

Pause menu

- Resume (resume the game)
- Option(settings of the game)
- Main menu(quit to main menu)
- Quit(Exit the game)

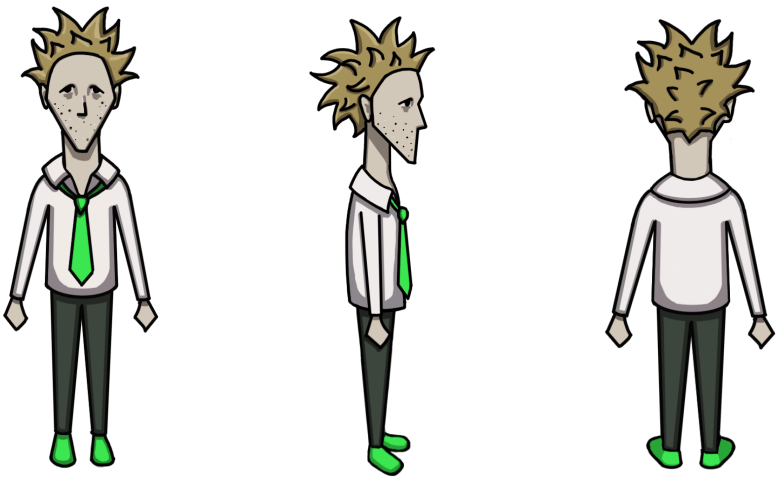
Camera

- Top down, follows the player
- Special effects if the player's need to gamble is too high.

Visual style

Art and design

The game will feature a distinctive hand-drawn art style, which will be used in all the visual assets and animations. The characters will be drawn simply, minimally shaded, with focus on the readability and atmosphere of the environment. Environmental storytelling.



Sound and music

Music

- Each level will come with its themed background music, which immerses the player into the story.
- Music will guide the player through the day, from a slow start to a rapidly accelerating boss fight.

Sound effects

- For a more immersive experience, most of the players' actions will be accompanied by sound effects.
- The sound effect will respond to player action, including hitting an enemy, taking damage, picking up coins, and much more.

Nice to have

Expansion of content

- More levels(rooms), more enemies, improved animations, boss in each room.

Table of content

- Book in the main menu, where all content in the game can be discovered and read about.

Achievements

- Achievements that the player can obtain throughout the game.
